Full-stack engineer with 10+ years in production, primarily React/TypeScript on the frontend, backed by real depth on the backend: Node.js, NestJS, Express, and Python (FastAPI), across fintech, banking, and B2B platforms. Comfortable owning a feature the entire way, from database schema and API design through to the UI that ships, not just the parts that render in a browser. Recent work includes leading a Feature-Sliced Design refactor and building an internal admin panel from scratch, plus managing OpenShift/GitOps environments and feature flags on the infrastructure side. Outside employment, designed and built Biassemble, a full-stack RAG/LLM system, using Claude Code and other agentic coding tools as part of the daily workflow. Looking for full-stack or frontend-leaning roles where backend fluency is a real asset, not an afterthought.

Core Competencies

- **Frontend:** React, Next.js, TypeScript/JavaScript, Redux Toolkit, TanStack Query, design systems, component-driven architecture
- **Backend:** Node.js, NestJS, Express, Fastify, Python (FastAPI), GraphQL, REST API design, PostgreSQL, MongoDB, Zod
- **Infrastructure & DevOps:** Docker, OpenShift, GitOps, CI/CD (GitHub Actions), feature flags, Git
- **AI-Assisted Engineering:** Claude Code and other agentic coding tools used daily; independent RAG/LLM system (Biassemble) with multi-provider integration and structured-output reliability
- **Testing & Quality:** Cypress, Jest, Testing Library, Vitest

Professional Experience

- **Tokentech** **Remote**
Senior Frontend Engineer 2025–Present
 - Led a Feature-Sliced Design (FSD) refactor of the frontend codebase across a team of ~20 engineers
 - Built an internal admin panel from scratch (Radix + Refine, 6+ pages), owning both frontend and backend integration
 - Extended the Node.js backend for the auth/account domain: signup, KYC, 2FA, API keys
 - Managed OpenShift/GitOps environments and feature flags
- **Newton Technology** **Remote**
Senior Frontend Engineer 2023–2025
 - Built a custom TanStack Query DSL and standardized API integration patterns across the team
 - Delivered a responsive redesign and investment account opening flows on a live trading platform
 - Shipped features with a team of 8-12 engineers; contributed to the React Native app alongside the web platform
- **Swift Invention Inc** **Remote**
Senior Frontend Engineer 2022–2023
 - Built three products from scratch, solo, at a 3-4 person startup: Vierally (React/Jotai/Vite), ProprOffr (real estate auction MVP, **NestJS/PostgreSQL/Stripe** backend, accessibility-focused frontend), MeeSmartWallet (promo site + Chrome extension prototype)
 - Owned each product end to end: architecture, backend API design, implementation, and delivery, with no dedicated backend or QA team
- **Jetlyn** **Remote**
Team Lead / Senior Frontend Engineer 2020–2022
 - Grew the frontend team from 1 to 3 engineers; owned task breakdown, code review, and internal engineering standards
 - Built an internal enterprise IT-request-workflow app from scratch with complex state-driven flows
 - Customized white-label banking applications for multiple clients; integrated SBP real-time payments

- **Purchasing Platform** 2018–2020
Senior Frontend Engineer
 - B2B wholesale marketplace; helped deliver a full application redesign
 - Introduced end-to-end testing with Cypress, establishing automated regression coverage for the first time on the project
- **Eastwood Lab, q-cis, and earlier roles** Kiev, Ukraine / Russia
Frontend Development Foundation 2006–2018
 - Progressed from general/PHP web development to modern frontend engineering: SPAs, AngularJS, custom native-JS architectures
 - Introduced unit testing (Karma/Jasmine); code review and light team coordination

Independent Projects

- **Biassemble** – full-stack AI system (3 repos, solo-built) that detects cognitive biases in a user’s own writing and presents the result as evidence-backed, structured output. Backend built with Python (FastAPI, PyTorch) and TypeScript (Fastify, Zod, Drizzle); frontend in React/Next.js; PostgreSQL/Supabase for storage; deployed with Docker.
 - Engineered the retrieval layer through three iterations based on measured evidence rather than preference, cutting worst-case latency from >200s/timeout to ~3s
 - Built a schema-enforced evidence-binding architecture with a repair pipeline for unreliable structured output, plus a CI-gated evaluation harness

Education

- **Penza State University** Russia
Engineer, Automated Information Processing and Control Systems 2001–2006
 Russian 5-year specialist degree, equivalent to BSc/MSc Computer Science. Final qualification work: “Automated customer accounting system at the enterprise.”

Languages

- Russian (native), English (professional working proficiency – IELTS 6.5, CEFR B2).

Certifications

- Generative AI Language Modeling with Transformers – IBM/Coursera, Jul 2026
- Generative AI and LLMs: Architecture and Data Preparation – IBM/Coursera, Jun 2026
- Building Generative AI-Powered Applications with Python – IBM/Coursera, Jun 2026
- Developing AI Applications with Python and Flask – IBM/Coursera, Jun 2026
- Prompt Engineering for ChatGPT – Vanderbilt University/Coursera, Jun 2026
- Python for Data Science, AI & Development – IBM/Coursera, Jun 2026
- Introduction to Artificial Intelligence (AI) – IBM/Coursera, Jun 2026
- Fundamentals of Machine Learning for Healthcare – Stanford University/Coursera, Dec 2025
- IELTS – Overall Band 6.5 (CEFR B2), Nov 2025
