leminds@gmail.com
linkedin.com/in/dmitrii-lemine-45013858

Senior Frontend Engineer with 10+ years of experience building web applications across fintech, trading, and enterprise domains, including team leadership and 0–1 product development.

Specialized in React, Next.js, and TypeScript, with focus on scalable frontend architecture and user-critical systems such as authentication, onboarding, and account management (KYC, 2FA, API keys).

Experienced across frontend and backend boundaries in both startup and enterprise environments, driving architectural decisions and delivering maintainable frontend solutions.

Comfortable working across frontend and backend boundaries, with hands-on experience in Node.js, REST/GraphQL APIs, and data-layer design using React Query.

Skills

Frontend:

React, Next.js, TypeScript, JavaScript, GraphQL, Tailwind, CSS Modules, styled-components, Zod

State Management & Data:

TanStack Query (React Query), Redux Toolkit, MobX, Jotai, Recoil

Backend & APIs:

Node.js, NestJS, Express, PostgreSQL, MongoDB, REST APIs

Testing:

Jest, Testing Library, Vitest, Cypress

Architecture & Practices:

Component-driven architecture, Feature-Sliced Design (FSD), performance optimization, OOP, SOLID, DRY, KISS, accessibility (a11y basics)

Tools & Workflow:

Git, Vite, Webpack, Docker, OpenShift, GitOps, CI/CD, Agile/Scrum, cross-browser development

Mobile:

React Native, Cordova

UI & Legacy (working knowledge):

Material UI, Bootstrap, BEM, Sass, Less, Stylus, Vue, AngularJS, jQuery

Experience

Senior Frontend Engineer — Crypto Trading Platform

Mar 2025 – Present

Tech: React, Next.js, TypeScript, GraphQL, CSS Modules, Strapi

Team: ~20 frontend engineers

- Owned core authentication and account domain (signup, KYC, 2FA, API keys), working with REST APIs and GraphQL to ensure stable user access across critical platform flows and support user activation
- Implemented redesign of the user cabinet, simplifying account management flows and increasing conversion from signup to first transaction
- Diagnosed and resolved edge-case issues in authentication flows (NextAuth), improving reliability of session handling, preventing session loss during active trading sessions
- Refactored parts of the codebase using Feature-Sliced Design (FSD), improving structure and maintainability
- Delivered features end-to-end, improving delivery predictability and reducing integration friction
- Built content-driven pages using Next.js App Router and SSR with Strapi, reducing client-side data fetching and improving initial load performance through server-side rendering and reduced client-side data fetching

Additional contributions:

- Built MVP for a token-related feature module using React, integrating with backend authorization powered by Casbin
- Built and owned the internal admin panel (6+ pages) using Radix and Refine, enabling operational workflows for internal teams
- Extended backend functionality using Node.js and REST APIs to support frontend-driven features and reduce integration gaps
- Managed environment configuration and feature flag workflows using OpenShift and GitOps, improving release control and deployment consistency

Senior Frontend Engineer — Trading Platform

Dec 2023 – Feb 2025

Tech: TypeScript, React, React Native, TanStack Query, Jest, styled-components

Team: mid-size frontend team (~8–12 engineers)

- Delivered features for a live trading platform, improving stability of core flows and reducing user-facing issues
- Applied a custom TanStack Query DSL to unify server/client state, reducing inconsistent data handling and improving reliability of user interactions
- Standardized API interaction patterns, improving maintainability and reducing friction in feature development
- Implemented responsive redesign for key user flows, improving usability and accessibility across devices

- Delivered user-facing features including investment account opening flows, directly supporting user conversion to active investor
 - Wrote and maintained tests using Jest and Testing Library, reducing regression risk in critical flows
 - Contributed to technical grooming and planning, improving delivery predictability
 - Contributed to mobile development using React Native, enabling cross-platform feature availability
-

Senior Frontend Engineer — Swift Inventions (Vierally / ProprOffr / MeeSmartWallet)

Dec 2022 – Nov 2023

Tech: TypeScript, React, Tailwind, Vite, Jotai/Recoil, NestJS, PostgreSQL, Astro

Team: small cross-functional team (3–4 engineers)

- Contributed across multiple products in a startup environment, supporting rapid iteration and product validation
- Built frontend applications from scratch, enabling fast delivery of new product features
- Developed reusable UI components and patterns, improving development efficiency and consistency
- Implemented list virtualization and optimized rendering strategies, improving performance of data-heavy interfaces, reducing UI lag in large datasets
- Integrated frontend with REST APIs and backend services and contributed to backend development, improving end-to-end delivery speed
- Participated in MVP delivery from concept to release, enabling early validation of product hypotheses

Project highlights:

- **Vierally:** Built frontend from scratch (React, Jotai, Vite) and established testing with Vitest
 - **ProprOffr:** Developed core frontend for a real estate auction MVP with attention to accessibility (a11y) standards and contributed to backend modules (NestJS, PostgreSQL, Stripe integration)
 - **MeeSmartWallet:** Worked on animated promo site using IntersectionObserver / MutationObserver and contributed to Chrome extension prototype
-

Team Lead / Senior Frontend Engineer — Jetlyn

Mar 2020 – Nov 2022

Tech: React, Redux Toolkit, Cordova, Jest

Team: started solo frontend → scaled to 3 frontend engineers (team all over 20)

Internal enterprise system:

- Built frontend application from scratch for IT request workflows, enabling structured multi-step approval processes
- Designed and implemented complex state-driven flows, reducing manual coordination and improving process efficiency
- Led frontend team growth from 1 to 3 engineers, increasing team delivery capacity

- Owned task breakdown, code reviews, and implementation consistency, improving code quality and reducing rework
- Collaborated with backend and architecture teams, ensuring stable system integration

White-label banking applications:

Team: small cross-functional team (3–4 engineers)

- Developed and customized banking applications for multiple clients, enabling reuse of core functionality across products
 - Integrated SBP (real-time payment system), enabling required payment flows for end users
 - Implemented mobile features using Cordova, enabling cross-platform access to banking services
-

Earlier Experience (Frontend Development Foundation)

2006 – 2020

- Progressed from web development to modern frontend engineering, expanding technical scope and responsibilities
 - Built SPAs, marketplaces, and admin systems, supporting business operations across multiple domains
 - Introduced end-to-end testing (Cypress), improving reliability of production releases
 - Developed responsive and hybrid applications, improving accessibility across devices
 - Transitioned from legacy frameworks to modern frontend architecture
 - Participated in code reviews and mentoring, improving team knowledge sharing
-

Education

Bachelor of Computer Science, 2001-2006
Penza State University

Languages

English — Professional working proficiency
Russian — Native
